

Krishnasinh Jadeja

Full-Stack AI Product Engineer

+91 7200397011 | jadejakrishna42@gmail.com | junimo.dev | linkedin.com/in/krishnasinh-jadeja-425a8b252 | github.com/K-Jadeja

Former Rechat AI engineering consultant and founding engineer building production AI products end to end across TypeScript/React, Python, real-time systems, and infrastructure.

Experience

Founding Engineer / Technical Lead, Remalt Jan 2026 - Present

- Lead engineering for a production multiplayer AI creative platform from zero to public launch, owning system architecture, full-stack implementation, AI workflows, technical roadmap, production infrastructure, and operational reliability.
- Scaled the platform to **1,500+ registered users**, **200+ monthly active users**, and nearly **50 daily active users**, supporting **2,700+ live workflows** and over **113,000 tracked product events per month**.
- Architected real-time collaborative editing using **Next.js**, **TypeScript**, **Hocuspocus**, **WebSockets**, **PostgreSQL**, and **Supabase**, supporting multiplayer infinite-canvas workflows and more than **98,000 versioned revisions**.
- Built multi-provider AI infrastructure covering model routing, BYOK and OpenAI-compatible integrations, document and media ingestion, vector retrieval, and image and content-generation workflows; processed **7,800+ uploaded documents** into **413,000+ vector embeddings**.
- Built and operate cost-efficient, Dockerized production infrastructure across **Hetzner** and **Supabase**, owning deployments, database reliability, production debugging, scaling decisions, and infrastructure cost control.
- Work directly with users and the founding team to turn ambiguous feedback into shipped features across collaborative editing, AI workflows, media ingestion, and creative tooling.

Co-Founder & AI Engineer, Conyx AI Solutions - Bengaluru, India May 2024 - Sep 2024

- Delivered **RAG chatbots** and AI agents for clients, owning requirements, architecture, implementation, and **Azure** deployment.
- Owned client scoping, communication, and technical delivery for support-automation AI projects.

AI Engineer, Neohumans.ai - Bengaluru, India May 2023 - Nov 2023

- Joined the founding team and migrated core companion-AI systems to open-source **Llama** models.
- Optimized self-hosted LLM endpoints to approximately **25 tokens/sec**, enabling real-time chat performance for the MVP.

AI Engineering Consultant (Contract), Rechat - Dallas, TX Aug 2023

- Improved Rechat's production **LangChain/OpenAI** form-filling workflows for real-estate professionals during a one-month contract.
- Refined retrieval context, prompts, and tool calling to improve suggestion relevance and reliability.

Projects

Greenpost (Podcast-to-Reels AI) - AI Video Repurposing & Editing Platform

- Built an end-to-end **Next.js** and **FastAPI** platform that turns **1-3 hour videos** into editable social clips using diarized transcription, LLM-based moment ranking, **MediaPipe** active-speaker tracking, automated reframing, and configurable animated captions and emoji overlays across multiple aspect ratios.
- Built a single-source rendering pipeline around headless Chromium, **WebCodecs**, Canvas/OffscreenCanvas, and **FFmpeg**, ensuring the same caption project produces consistent results across initial generation, editing, browser export, and server-side re-rendering.
- Designed and benchmarked scale-to-zero **Modal** CPU fan-out; three two-core workers reduced a representative nine-clip render batch from **8:01 to 3:43** at approximately **\$0.04**, with **27/27 outputs** passing visual, audio, timing, font, color, and final-frame validation.

Doru - Real-Time Voice/Avatar Agent

- Built a real-time conversational avatar with browser-local **Sherpa-ONNX** ASR and **Kokoro-int8** TTS, streaming conversation and state over **WebSockets** to a self-hosted backend.
- Designed the voice loop around low latency, interruptions, and turn-taking; keeping speech inference client-side eliminates server-side ASR/TTS inference while a **PixiJS + Live2D** frontend stays synchronized with the conversation.

Zapier-LangChain Agent - Open Source

- Created an open-source LangChain and agent educational series for **900+ followers** on X (@krsnalyst).
- Integrated **Zapier NLA** with OpenAI so agents could trigger real-world actions, including sending emails, from natural-language prompts.

Skills

Languages: Python, TypeScript, JavaScript, C++, SQL/PostgreSQL

AI/ML: LLM agents, RAG, tool calling, evaluation pipelines, embeddings/vector search, multimodal AI, LangChain, PyTorch

Full-Stack: React, Next.js, Node.js, FastAPI, WebSockets, APIs, webhooks, Hocuspocus, PixiJS, WebCodecs

Infrastructure: Docker, GitHub Actions, Azure, Hetzner, Supabase, Modal, FFmpeg

Education

B.Tech in Electronics and Computer Engineering, Vellore Institute of Technology

2026 | CGPA: 8.44 / 10
